Transparency Helps Assure Successful Project Management

“Proactive project management drives collaboration, support and engagement among our employee-owners, which leads to successful project completion.”

Transparency is a critical factor that drives successful project management. There are many reasons why we feel it's critical to insist on transparency and accountability on every project, especially when we consider our industry's current labor and materials challenges.

Transparency is defined as “the quality of being done without secrets.” No surprises. In the realm of glazing and our unique processes, it means creating a project management system where every project team member can access all relevant information about a project quickly and easily.

We recently realized that our teams needed new strategies and shared systems to manage material delays and labor issues. If a project manager (PM) is promoted, transferred or terminated during a project's lifecycle, we have implemented processes so their projects continue smoothly. These processes enable PMs--even from different office locations if needed--to take the baton and carry the project forward. The steps we've established to maintain that continuity have helped us keep our relationships and build trust with internal and external business partners.

Step by Step

Over time, we have fine-tuned our process to include:

- Requiring each PM to have their project schedules updated, filed and maintained through the life of each project. Weekly and bi-weekly check-ins with project team leads (both internal and external) to update everyone about the project status, a timeline of required materials and the next steps.
- A procedure that includes standardized reporting and a centralized, paperless filing system for all project documents--on a shared drive--with checks and balances to ensure that procedures are being followed and necessary updates are made.
- Periodic status updates that include meetings with project team leads and summa-

ries into email groups that cover all project communications.

These steps help us see red flags early on, prevent job fades, and implement recovery plans when we identify issues. We use weekly material and labor tracking to get our schedules and budgets back on track.

Attention to Detail

We consider it crucial to have a documented project plan and a dedicated PM with experience across multiple disciplines. Their job is to manage the process, hold the team accountable, and use our standardized procedures and processes to ensure transparency on timelines, accurate data, the status of deliverables, potential risks, and mitigation plans. We know that proactive project management drives collaboration, support and engagement among our employee-owners, which leads to successful project completion.

Part of our process includes clearly defining roles and responsibilities, which enhances collaboration. It also improves customer satisfaction.

Our transparency methods also mitigate scope creep. Maintaining regular communication updates with clients and team members provides all stakeholders the access and visibility needed to identify and address problems.

It's rare for projects to be completed without disruptions that cause us to modify the original plan. While it's the project manager's role to identify those risks, they need the support of their entire team to implement the required plan adjustments.

Behind every one of our successful projects is a structure, a formulated checklist, copious amounts of coffee, and an organized project manager, if not several. Compelling project managers are the backbone of every project -- making sure that we deliver projects on time and with excellence.

USG

➔ **Nataline Lomedico** is the president and CEO of Giroux Glass, headquartered in Los Angeles. The company has been in business since 1946.

Move Makers

USGlass Magazine's 2023 Listing of the Nation's Top 50 Contract Glaziers

Healthy backlogs, market and cost stability as well as supply chain improvements are just some reasons why contract glaziers are optimistic about the year ahead. 2022 was a solid, strong year for most of the nation's top contract glaziers. Many of the companies reporting for this year's **USGlass** magazine listing of the Top 50 contract glaziers continue to show sales increases, though there were a few notable dips.

Companies still have some concerns despite the positives. Not surprisingly, the biggest worry for the year ahead is a lack of skilled labor. Schedule delays, and overall concerns about the economy and a possible recession are also troubling.

As in years past, there was some fluctuation among the top five companies, including a new addition. Permasteelisa North America took the No. 1 spot with 2022 sales of \$403 million compared to \$295 million last year. This moved Harmon to No. 2 with sales of \$340.8 million, which is also what the company reported last year. Enclos remained in the No. 3 position, while Elicc bumped up from No. 5 to No. 4 with sales of \$247 million compared to

\$221.5 million. Reflection Window + Wall was the top five new addition, reporting sales of \$240 million.

There were also some ups and downs in sales across the entire list. Crown Corr moved into No. 6 from No. 8 with sales of \$203 million compared to \$170.7 million. Massesy's Plate Glass remained in 13th place, but saw sales jump from \$101 million to \$125 million. Another big mover was Seele. The company's U.S. operations jumped from No. 47 to No. 28 with sales of \$63.6 million compared to \$23.5 million.

The information in this section was provided to **USGlass** by the companies included here. Backlog is listed only when provided by the companies. Those companies marked with an * are estimated based on data and field reports from Key Media & Research.

Reflection Window + Wall has been involved in a number of projects in the Chicago area including the Cirrus (right) and Cascade towers that are part of the Lakeshore East development.

Building a Milestone: Permasteelisa Group Celebrates 50 Years

The Permasteelisa Group had already been operating for 26 years when it took on its first U.S. projects in 1999. One was 10 St. James Street in Boston; the other was the Walt Disney Concert Hall in Los Angeles. Since then, the Italian façade contractor has worked on many complex and unique projects worldwide. It is consistently ranked in the top five of USGlass magazine's annual listing of

company, while Permasteelisa has had an international focus since early on, its work remained mainly in Europe and Asia for many years.

"It was only in the late 1990s that the group arrived in the United States, the birthplace of skyscrapers," says the company information.

Today, Permasteelisa is a global industrial group with three brands, 30 companies and six production

A special anniversary logo features a broken line unfolding upwards to represent a building under construction while knowledge and ideas keep evolving.

bridge people, buildings and cities towards the future comes from."

The statement continues, "Our technical expertise has always enabled us to successfully tackle the most complex and challenging projects around the world. In recent years, our selective strategy has focused on highly complex and challenging projects in markets where our customers appreciate and value the advanced and distinctive solutions that differentiate us from our competitors."

The global glazing industry will face both challenges and opportunities in the years ahead.

"In the next ten years, 70 percent of the world's population will live in cities, putting sustainable development and other global challenges, including climate change, at the center," says the company statement. "Building while reducing the carbon footprint is paramount, and we are already on the right track. Many aging buildings contain sound structures and can be rehabilitated for different uses or use by future generations. Creative and efficient solutions for recladding existing buildings could be a massive opportunity for the facade industry."

After 50 years in business, what's next for Permasteelisa? "We constantly keep clients at the heart of our practice, providing pragmatic and tailored solutions, as well as guaranteeing soundness and reliability towards governments, universities, media, financial institutions and shareholders, but also towards our brands, employees and local communities," says the statement. "We always strive for the extra mile: our commitment is to go big, to make our people proud. The responsibility we feel on our shoulders is to leave a mark and improve society. This is where we want to be in the next 50 years: in a better society we have helped build."

Photo: shutterstv; Shutterstock.com

The Walt Disney Concert Hall in L.A. was one of Permasteelisa's first U.S. projects. It was designed by Frank Gehry.

the nation's top contract glaziers and took the No. 1 spot this year (*turn to page 36 to read more*). That gives Permasteelisa at least two things to celebrate, as this year also marks its 50th anniversary.

Permasteelisa's roots date back to 1973 with the founding of I.S.A., an aluminum window company based in Treviso, Italy, now home to the Group's headquarters. Shortly after its debut, I.S.A. turned to curtainwall with the acquisition of Permasteel, the Australian company that clad the Sydney Opera House. The company expanded globally with other acquisitions, including the Dutch Scheldebouw B.V. and Gartner in Germany.

According to information from the

plants in 20 countries. Some of its major projects worldwide include Hong Kong's tallest building, the International Commerce Center; Beekman Tower, the Guggenheim Museum and MoMA in New York; and the Walt Disney Concert Hall in Los Angeles, among others. The company has more than 60 projects underway, including Google offices in London and the U.S.

According to the company, Permasteelisa was born "with an engineering mindset: insightful understanding is etched in our DNA. Variants and variables are our everyday thrill: they are embedded in the unique diversity that sets our group and people apart. That's where our flair for solutions that
