# BIGGER BETTER STRONGER

**USG**lass Magazine's 2019 Ranking of the Top 50 Glazing Contractors

Carlos 'Andy' Gonzales/Enclos

**Enclos** was selected to design, fabricate and install the curtainwall enclosure system of 30 Hudson Yards (Tower A) in New York. The glass-sheathed building will also feature an angled triangle above the projecting observation deck.

y all accounts, contract glaziers are excited for the year ahead. A healthy economy, steady growth and sales, and an increasing focus on quality were all cited as reasons for optimism by this year's top companies. There is at least one matter that's keeping everyone awake at night, though: employment. That lack of skilled labor combines with trade wars and tariffs as some of the biggest concerns for contract glaziers.

While the top five companies remained the same as last year, a couple swapped places. Permasteelisa and Enclos maintained the No. 1 and No. 2 spots, while Harmon moved up to No. 3, shifting Benson down to No. 5. Elicc Americas Corp., which joined the list last year in the No. 7 spot, took a considerable dip to No. 38.

The information in this section was provided to **USG**lass by the companies included in it. Annual sales listed include volume for both commercial and residential work only. The backlog change refers to the increases or decreases in reserved projects from 2017 to 2018. Change in backlog is included only when provided by the company. Companies are ranked based on their 2018 annual sales. Those companies marked with an \* are estimated based on data and field reports from Key Media & Research.

continued on page 44

The Miami Beach Convention Center features an undulating façade of aluminum fins and canopies in front of **Harmon**'s HI9000 hurricane impact curtainwall system. Harmon, in partnership with Sentech Architectural Systems and Mid Am Metal, designed, fabricated and installed 489 unique aluminum fins to achieve the distinctive look.

### PROJECT COLLABORATION

# "If We're Not on Time, We Will Not Make Money"

One of the biggest challenges for contract glaziers is working closely enough with architects to provide education about building envelope details and designs. Early collaboration, for example, allows glazing contractors to help architects finish the detailing, and it often comes in the way of design-build or design-assist delivery methods. By engaging with the architect and project team early on, contract glaziers can provide assistance in areas such as developing and staying within a budget. In turn, this can help avoid seemingly simple changes that could ultimately have significant pricing implications.

Contract glaziers are quick to point out the numerous challenges inherent in working with architectural designs and specifications. According to Coleman Jones, director of business development with Pioneer Cladding and Glazing Systems in Cincinnati, these can include issues with door and hardware specifications. He says this information isn't always available early when the project is awarded.

"And when they are available, they're specified in a configuration that doesn't work," he says.

Another concern he points out is that specifications are becoming increasingly stringent and are sometimes unobtainable while warranties keep growing. And then there's timing.

"The design changes and the lack of decision-making delay projects and hurt every party involved—owner, architect, general contractor and all of the subs," he says. "This costs everyone time, money and even people."

Kristopher Lazaroff who is a part of the Elicc America Group field business development team, says all of the projects his company takes on are design-assist, allowing them to work closely with the project team, including owners, architects and contractors.

"We are able to design the most cost effective system to meet the aesthetic and functional needs, such as sound transmission and thermal insulation capabilities," he says. "We are also able to design the most cost efficient system for installation, speeding up construction time, such as changing from a window wall to curtainwall system."

Marty Trainor, vice president of pre-construction with Ventana Design-Build Systems based in Chicago, agrees the biggest challenge with specifications are the inconsistencies.

"Specifications can ask for certain materials that do not meet the performance requirements stated in other sections of the specification," he says. "Do we bid the specified materials or the more expensive materials that meet performance requirement?"

Getting involved with the project early on can help alleviate many of these issues. "You get brought in as part of the solution, you can create reverse schedules, note

important lead times and head off multiple problems," Jones says "Additionally, being brought in as a design-assist partner helps align each party's goals. I believe that one of the key factors from this point is establishing a clear budget. We all know what it takes to hit the budget, but if the budget stays a secret we all keep chasing our tails. That being said, our plan is to use our reputation to deliver design-assist collaboration on time and within budget so that we continue being brought to the table."

According to Trainor, "By being involved early, we can help develop the appropriate design criteria that meet project requirements and budget, while maintaining the aesthetic desired by the design team ... [early involvement] allows us to price all the components of the façade systems individually."

He adds, "Collaborating is the only way of being able to meet aggressive schedules with complex façade elements. If we are not on time, we will not make money"

-Ellen Rogers
